

IT Database Management Intern

Why Join Us?

The position would assist with front-line, day-to-day Operational DBA (database administration) tasks and work on internal database-related tasks.

You will:

- Solve ongoing Microsoft SQL Server database problems that are reported by our monitoring software or by our customers.
- Execute standard database changes that are submitted by our customers. These include “data surgery”, execution of Compassion-developed database stored procedures, etc.
- Execute various database instance housekeeping/cleanup tasks. Additionally, operational documentation for our team will be reviewed and improved as required.
- Bring your unique capabilities and skills. Our hope is to partner with you to develop additional projects that focus on your interests and talents.

You have:

- Conceptual knowledge of modern-day relational database management systems, including database ACID properties (<http://en.wikipedia.org/wiki/ACID>), etc..
- Knowledge of database administration and programming in a Microsoft SQL Server environment.
- Ability and willingness to learn and follow our internal production change management processes.
- Solid communication and organizational skills.
- Ability to handle multiple projects/tasks simultaneously.
- Willingness to serve others and develop positive working relationships.
- Bonus Points: Knowledge of Microsoft Windows system administration and/or knowledge/skills of software development process

You study:

- Information Technology, Business or other related fields.
