

Software Development Intern

Why Join Us?

Use your passion for software development on one of our 11 agile teams to support Compassion's initiatives while learning what it is like to be a part of a large solutions engineering program.

You will:

- Be a part of an agile team in a scaled agile environment
- Develop and configure software for various internal customers across the Ministry including all phases of design, build, test and deploy
- Receive in-depth training on the Scaled Agile Framework (SAFe)® and have a chance to become a certified SAFe® Practitioner
- Work face-to-face with other developers, as well as customers
- Celebrate success, learn from mistakes and grow your software skills

You have:

- Knowledge of Object Oriented Programming practices
- A desire to learn new technologies
- A basic understanding of agile software development practices
- Strong organizational skills, attention to detail, and analytical thinking skills
- Ability to develop creative ideas from specified strategies
- Ability to take direction and work independently on assigned tasks

You study:

- Information Systems, Computer Science, Engineering, or related field of study
